

Interpretando “signed” y “unsigned”

Rango de números enteros representables con n bits:

- Números sin signo (*unsigned*): $[0, 2^n - 1]$
 - Si $n = 8 \rightarrow [0, 255]$
- Números con signo (*signed*): $[-2^{n-1}, 2^{n-1} - 1]$
 - Si $n = 8 \rightarrow [-128, 127]$

Primer caso

	Signed	Unsigned
01101111 + 10000000	111	111
	-128	128
11101111	-17	239

OF = 0, CF = 0, SF = 1

Un caso con acarreo

	Signed	Unsigned
11000000 + 11100000 1 10100000	-64 -32 -96	192 224 160
		+ 256
		416

OF = 0, CF = 1, SF = 1

Un caso más feo

	Signed	Unsigned
11000000 + 10100000 1 01100000	-64 -96 96 ↕ -160	192 160 96 + 256 352

OF = 1, CF = 1, SF = 0

Última combinación

	Signed	Unsigned
0 1 0 0 0 0 0 0 + 0 1 0 0 0 0 0 0 1 0 0 0 0 0 0 0	64	64
	64	64
	-128	128
↓	↕	
OF = 1, CF = 0, SF = 1	128
